

Franklin Enguerra

Dear Hiring Manager,

I am writing to apply for the **Junior Software Developer** position. I am a recent Computer Science graduate with hands-on experience in full-stack and backend development, gained through my internship and several academic and personal projects.

During my internship as a Backend Developer, I worked on developing APIs, managing databases, and supporting web application development using technologies such as PHP, Laravel, MySQL, Next.js, and NestJS. I also led the development of a gamified Java learning platform called *CodeQuest*, where I served as the team leader and contributed to backend development and system integration.

In addition to my development experience, I hold a TESDA NC II certification in Network System Servicing and have completed Agile training, which helped me strengthen my collaboration and problem-solving skills in a team environment.

I am eager to apply my technical skills, continue learning modern technologies, and contribute to building efficient and reliable systems as part of your development team. I would welcome the opportunity to further discuss how I can contribute to your organization.

Thank you for your time and consideration.

Sincerely,

Franklin Enguerra
